

Signature Touch 1

High Performance Cable / Harness Tester

Pentium built in

Touch screen display

Up to 1500VDC Hipot

Self learn programming

Continuity, resistors, diodes, capacitors

Cable and harness testing is now easier than ever thanks to the new Cirris Touch 1 . It combines the power of an integrated Pentium PC and large graphical touch screen display with bullet proof H+ tester technology for the fastest, easiest to use cable tester ever!

Easy to use and comprehensive:

Touch 1 tests cables, provides statistical reporting, supports networking, up-loading and downloading of files, test point relabelling and it is intuitive to use. It guides the operator via its large graphical touch screen through every step with easy to follow instructions. It performs checks for opens, shorts, mis-wires, high resistance connections and insulation problems such as dielectric failures. Touch 1 also tests resistors, diodes, capacitors and twisted pairs and performs 4-wire tests for 0.001 ohm resolution.

Password Protection:

Allows you to create custom access levels for each operator.

Interchangeable Adapters:

Cirris offers the widest range of interchangeable adapter cards in the industry. Our new replaceable adapters even allow you to replace the connectors yourself, saving more time and money

System features:

Integrated Pentium PC with floppy and hard drives; serial and parallel ports; optional ethernet port; ports for external keyboard and monitor.

Durable, Reliable:

Touch 1 is built for a high volume production environment. It is backed by our 30 day right of return guarantee, and overnight repair/ loan programme. Cirris have over 5,000 customers world-wide and over 15,000 testers installed.

Key features:

Built-in PC. Touch 1 features an integrated Pentium PC, complete with floppy and hard disk drives; keyboard, monitor, serial and parallel ports and optional ethernet port.

Graphical touch screen display:

The large (90 x 115mm) graphical touch screen panel provides operator interface to Touch 1. Simple to follow menus prompt the user through all of the set-up functions. From resistance and voltage settings to point labelling and file naming, it's all at your fingertips.

Complete testing:

The Touch 1 performs the most thorough testing possible on your wiring assemblies. It checks for opens, shorts, mis-wires, high resistance connections (due to cold solder joints, mis-crimping etc.), and insulation problems such as dielectric failures, etc. It can also test resistors, diodes, capacitors and twisted pairs.

4-Wire Kelvin Test:

When used in the 4-wire mode the Touch 1 nulls out fixture resistance and performs resistance measurements down to 0.001 ohms resolution. ▶
